

# Assignment 1

Q16

Basel  $\rightarrow$  Baden  $h=38 \rightarrow$  Aarau  $h=44$

Olten  $h = 51$

Zürich  $h=23 \rightarrow$  Zug  $h=0$

1. Basel  $\rightarrow$  frontier = {Baden, Olten}
2. Baden  $\rightarrow$  frontier {Aarau, Zürich, Olten}
3. Zürich  $\rightarrow$  frontier {Zug, Aarau, Olten}
4. Zug

This is the most optimal path, however Greedy best-first is not always optimal or complete

The path cost is  $(70 + 24 + 32) = 126$

All other paths Avoiding Baden would have a minimum cost of 142

And all other paths to Baden would be  $> 70$  meaning  $\text{Pursel} \rightarrow \text{Baden}$  is optimal

All other paths  $\text{Baden} \rightarrow \dots \text{Zug}$  would have a minimum cost of  $107 > 56$  of  $\text{Baden} \rightarrow \text{Zürich} \rightarrow \text{Zug}$ .

Q2.

1. Arad  $\rightarrow F \{ Zimind, Sibiu, Timisoara \}$
2. Sibiu  $\rightarrow F \{ Faguras, RV, Zimind, Timisoara \}$
3. RV  $\rightarrow F \{ Pitesti, Meavlea, Faguras, Zimind, Timisoara \}$
4. Faguras  $\rightarrow F \{ Bucharest, Pitesti, Meavlea, Zimind, Timisoara \}$
5. Pitesti  $\rightarrow F \{ Bucharest, Craiova, Zimind, Timisoara \}$
6. Bucharest

The heuristics are admissible and therefore the path found is the most optimal

[Bonus].

Starting

h  
 1 = 1  
 2 = 1  
 3 = 0  
 4 = 1  
 5 = 1  
 6 = 0  
 7 = 0  
 8 = 1  
 -----  
 5

Path: 4 → 1 → 2 → 5 → 8
